

Managing climate risk, together with the ability to measure and disclose, has become a critical aspect for investment managers. Given the potential impact of physical and transitional climate-related risks on many portfolios and businesses, certain climate change assessments and reporting standards are increasingly being codified as regulatory requirements. In Hong Kong, Securities and Futures Commission (SFC) have proposed to amend the Fund Manager Code of Conduct (FMCC) requiring climate-related risks to be considered by fund managers.

In this webinar, hosted by the Hong Kong Securities and Investment Institute, Leonie Kelly will discuss why climate-related financial risks are taking centre stage globally and locally and the growing legal and regulatory climate disclosure requirements around the world.

By the end of this webinar, participants will understand:
